DETAILED ACTION

This Office action is in response to the communication filed 2-15-06.

Claims 1, 2, 5-10, 23-25, 28, 29 and 37 are pending in the instant application.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Response to Arguments and Amendments

Withdrawn Rejections

Any rejections not repeated in this Office action are hereby withdrawn.

Maintained Rejections/ Rejections Necessitated by Amendment

Claims 1, 5-10, 28, 29 and 37 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention for the reasons of record set forth in the Office action mailed 8-15-05.

Applicant's arguments filed 2-15-06 have been fully considered but they are not persuasive. Applicants argue that the written description requirements have been met upon amendment of the pending claims and that one of skill in the art can readily identify the genus comprising the breadth of conservative substitutions now claimed. Contrary to Applicant's assertions, the claimed genus still embraces a myriad of sequences that have not been adequately described in the art or in the instant

disclosure. The disclosure of a single polypeptide sequence, along with the general description of an ER retention motif and purported membrane spanning sequences flanked by charged residues, in the absence of well developed prior art, mutational analysis or other structure function relationships distinguishing this novel polypeptide from other endoplasmic reticulum polypeptides, do not fulfill the requirements for adequate written description for the genus claimed.

The structure function information provided in the prior art and in the instant disclosure is of a general nature because it describes common attributes of endoplasmic reticular or intramembranous proteins. The presence of such common elements does not address the question of what structures are required for the genus comprising homologues of Nogo B comprising conservative amino acid substitutions, or comprising oligonucleotides unique to Nogo B cDNA without recitation of the appropriate polynucleotide sequence. The specification and claims do not adequately describe the polynucleotides between 8 and 50 nucleobases in length that are unique to Nogo B cDNA, whereby their administration inhibits cell growth in vitro, as recited in claim 28 and as embraced by claim 29.

Claim Objections

Claims 23-25 are objected to because of the following informalities: In claim 23, line 3, the text –polynucleotide—appears to be missing after “said” and before “between”. Appropriate correction is required.

Allowable Subject Matter

Claims 2 and 23-25 appear free of the prior art searched and of record.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
